

MAXIMIZE YOUR INVESTMENT

Give your crops a Balanced Nutrition Plan throughout the growth cycle. WOLF TRAX® DDP® micronutrients are formulated to prevent soil or weather induced micronutrient deficiencies that can limit crop performance and yield potential. The patented technology in every WOLF TRAX formulation can simplify nutrient management, improve handling and enhance potential return on investment.

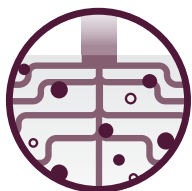

ENSURE EVEN DISTRIBUTION

With patented EvenCoat® Technology, nutrients uniformly coat the surface of every granule in a fertilizer blend to allow micronutrients to be distributed evenly across the field. This results in significantly more granules per square foot when compared to other nutrient sources.

CUSTOM NUTRIENT BLENDS

Combining micronutrients conveniently delivers what crops need most throughout the growing season to maximize crop performance. WOLF TRAX allows this flexibility by custom blending multiple DDP micronutrients to provide crops with a with a targeted nutritional mix.

COMBAT DEFICIENCIES

Access to essential nutrients is critical to ensure a successful yield. With WOLF TRAX micronutrients, crops can access what they need when they need it, to limit both visible and unseen deficiencies that can lead to yield reduction.

OPTIMIZE YIELD POTENTIAL

Equip crops to better handle environmental stress with WOLF TRAX. Better micronutrient placement in closer proximity to growing roots provides more points of contact. This increases nutrient uptake potential and crop performance by protecting from yield limiting factors.

Set crops up for success with a Balanced Nutrition Plan.
