

BENEFITS OF WOLF TRAX® BORON & ZINC DDP® ON SORGHUM

WOLF TRAX® DDP® micronutrients provide an excellent method of applying micronutrients where sorghum roots can access them in the right amount for required yields. Specifically designed to simplify nutrient management and boost crop performance, WOLF TRAX micronutrients allow plants to access the right rate of nutrients throughout the growth cycle.

SIMPLIFY NUTRIENT MANAGEMENT WITH WOLF TRAX

WOLF TRAX DDP micronutrients are uniquely designed to coat dry fertilizer blends and deliver highly-available nutrition through better distribution in the field than traditional granular micronutrients. This is achieved with patented EvenCoat® Technology.

With EvenCoat Technology, WOLF TRAX products thoroughly coat each and every granule. The result is an even distribution across the field and delivery of the right amount of micronutrients needed in close proximity to growing roots.

IMPORTANCE OF BORON

Critical to the growth and health of all crops, boron plays a major role in pollen tube formation, pollen germination and grain fill. With the right amount of boron available for plant uptake, it will aid in plant development with cell wall and plant structure formation, overall maximizing your yield potential.

BENEFITS

- Responsible for cell wall development and the translocation of sugar.
- Strengthens cell walls.
- Improves root development.
- Facilitates reproduction processes such as, pollen germination, pollen tube formation and grain fill.

WHEN TO UTILIZE

- Coarse-textured soils with low CEC and low organic matter.
- Soils with a high pH (> 6.8)
- High moisture conditions. Boron is mobile in soils and can be leached out of rooting zone with excessive rainfall.

IDENTIFYING DEFICIENCY

- Abnormal growth of upper leaves.
- Shortened internodes.
- Sorghum seed heads may not be fully filled.

IMPORTANCE OF ZINC

Zinc is an essential component of various enzymes which are required for growth hormones and several metabolic processes. It is also a key component in the production of protein, carbohydrates and chlorophyll—all contributors to obtaining an optimized yield potential.

BENEFITS

- Production of chlorophyll, carbohydrates and proteins.
- Responsible for enzyme and metabolic reactions.

WHEN TO UTILIZE

- Coarse-textured soils with low CEC or soils with high pH (>6.8).
- Low organic matter.
- Cool, wet soil conditions reduce root interception. Zinc moves via diffusion making root development essential.

IDENTIFYING DEFICIENCY

- Yellow leaf striping on upper leaves and shortened internodes.
- Leaf's area near stalk may develop white to yellow discoloration.
- Lower leaves may have reddish or yellowish streak near leaf margin.

GET A BALANCED NUTRITION PLAN WITH WOLF TRAX

With WOLF TRAX® DDP® micronutrients, you can have the confidence your sorghum is receiving the right amount of zinc and boron needed with a uniform distribution across your field. This provides your crops with a balanced nutrition plan to maximize your yield and decrease your risk of deficiency and hidden hunger.

Application timing: Early in the season.

Set crops up for success with a balanced nutrition plan.
