

WOLF TRAX®

BENEFITS OF WOLF TRAX® BORON & ZINC DDP® ON ALMONDS

WOLF TRAX® DDP® micronutrients provide an excellent method of applying micronutrients where almond trees can access them in the right amount for required yields. Specifically designed to simplify nutrient management and boost crop performance, WOLF TRAX micronutrients allow plants to access the right rate of nutrients throughout the growth cycle.

SIMPLIFY NUTRIENT MANAGEMENT WITH WOLF TRAX

WOLF TRAX DDP micronutrients are uniquely designed to coat dry fertilizer blends and deliver highly-available nutrition through better distribution in the field than traditional granular micronutrients. This is achieved with patented EvenCoat® Technology.

With EvenCoat Technology, WOLF TRAX products thoroughly coat each and every granule. The result is an even distribution across the field and delivery of the right amount of micronutrients needed in close proximity to growing roots.

IMPORTANCE OF BORON

Critical to the growth and health of all crops, boron plays a major role in pollen tube formation, pollen germination, nut set and yield. With the right amount of boron available for plant uptake, it will aid in plant development with cell wall and plant structure formation, overall maximizing your yield potential.

BENEFITS

- Responsible for cell wall development and the translocation of sugar.
- Strengthens cell walls.
- Facilitates reproduction processes for uniform flowering and improved pollination.

WHEN TO UTILIZE

- Coarse-textured soils with low CEC and low organic matter.
- Soils with a high pH (> 6.8).
- Low moisture conditions and drought.
- High moisture conditions. Boron is mobile in soils and can be leached out of rooting zone with excessive rainfall.

IDENTIFYING DEFICIENCY

- Abnormal leaf scorch and dieback of leaf shoots.
- Nut drop followed by increased vegetative growth.
- Malformed nut development and reduced nut size.
- In severe cases, trees may become unproductive.

IMPORTANCE OF ZINC

Zinc is an essential component of various enzymes which are required for growth hormones and several metabolic processes. It is also a key component in the production of protein, carbohydrates and chlorophyll—all contributors to obtaining an optimized yield potential.

BENEFITS

- Production of chlorophyll, carbohydrates and proteins.
- Responsible for enzyme and metabolic reactions.
 - Aids in uniform budbreak in Spring.
 - Improves shoot elongation and expansion.

WHEN TO UTILIZE

- Coarse-textured soils with low CEC or soils with high pH (> 6.8).
- Low organic matter.
- Cool, wet soil conditions reduce root interception. Zinc moves via diffusion making root development essential.

IDENTIFYING DEFICIENCY

- Interveneal leaf yellowing and shortened internodes.
- Reduced fruit set and nut development.
- Newest leaves may appear bronze with twisted margins.

GET A BALANCED NUTRITION PLAN WITH WOLF TRAX

With WOLF TRAX® DDP® micronutrients, you can have the confidence your almond trees are receiving the right amount of zinc and boron needed with a uniform distribution across your field. This provides your crops with a balanced nutrition plan to maximize your yield and decrease your risk of deficiency and hidden hunger.

Application timing: Apply in the fall pre-bloom from the pink bud stage to 10% bloom.

Set crops up for success with a balanced nutrition plan.
