

BENEFITS OF WOLF TRAX® BORON DDP® ON COTTON

WOLF TRAX® Boron DDP® provides an excellent method of applying boron where cotton roots can access it in the right amount for required yields. Derived from three forms, boric acid, sodium tetraborate and potassium tetraborate, WOLF TRAX Boron DDP is specifically designed to simplify nutrient management and boost crop performance.

SIMPLIFY NUTRIENT MANAGEMENT WITH WOLF TRAX

WOLF TRAX DDP micronutrients are uniquely designed to coat dry fertilizer blends and deliver highly-available nutrition through better distribution in the field than traditional granular micronutrients. This is achieved with patented EvenCoat® Technology.

With EvenCoat Technology, WOLF TRAX products thoroughly coat each and every granule. The result is an even distribution across the field and delivery of the right amount of micronutrients needed in close proximity to growing roots.

IMPORTANCE OF BORON

Critical to the growth and health of all crops, boron is one of the most important micronutrients for cotton production and maximizing yield potential. However, as a micronutrient that does not easily move in the plant, boron must be continuously taken up by the crop throughout its growth cycle.

B

BENEFITS

- Aids in the production of basic organic acids and hormones.
- Crucial in maintaining plant membranes and is found in higher levels in leaves, growing tips and fiber.
- Enhances pollination, flower set and boll retention.

WHEN TO UTILIZE

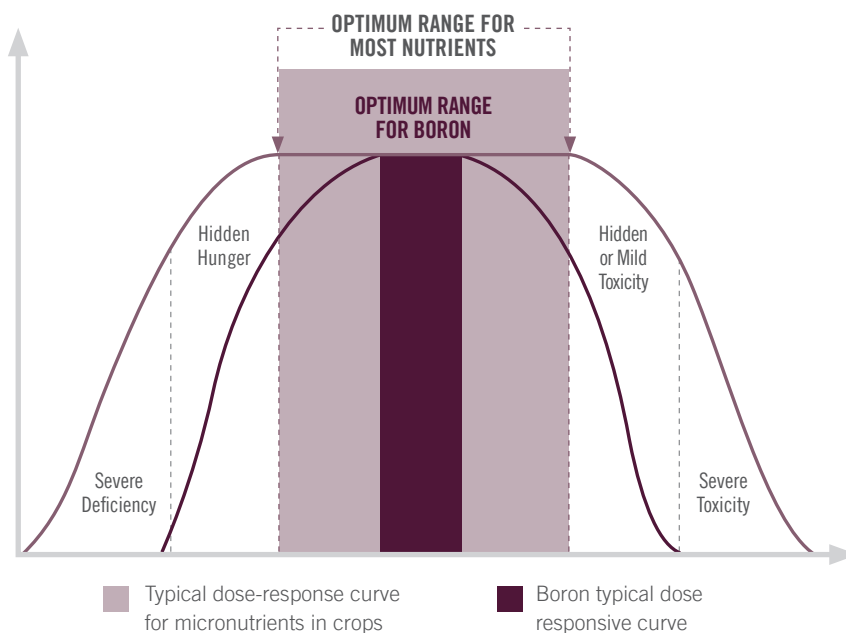

- Sandy soils and soils with a low CEC.
- Soils with high pH.
- High rates of lime or gypsum.
- When applying higher levels of Calcium. Boron deficiency can reduce the uptake of calcium in cotton and decrease the movement of calcium through the plants.

IDENTIFYING DEFICIENCY

- Formation of brown rings on the petiole.
- Shortened internodes, causing a bushy or rosette appearance.
- Bolls are deformed and reduced in size.
- Death of the terminal bud.
- Stunted root growth.

GET A BALANCED NUTRITION PLAN WITH WOLF TRAX

One of the main concerns with boron is the narrow line between deficiency and toxicity. With WOLF TRAX® DDP® micronutrients, you can have the confidence your cotton is receiving the right amount of boron needed with a uniform distribution across your field. This provides your crops with a balanced nutrition plan to maximize your yield and decrease your risk of deficiency, hidden hunger and toxicity.

Application timing: Early in the season.

Set crops up for success with a balanced nutrition plan.
