

WOLF TRAX®

BENEFITS OF WOLF TRAX® BORON DDP® ON SUGARBEETS

WOLF TRAX® Boron DDP® provides an excellent method of applying boron where sugarbeet roots can access it in the right amount for required yields. Derived from three forms, boric acid, sodium tetraborate and potassium tetraborate, WOLF TRAX Boron DDP is specifically designed to simplify nutrient management and boost crop performance.

SIMPLIFY NUTRIENT MANAGEMENT WITH WOLF TRAX

WOLF TRAX DDP micronutrients are uniquely designed to coat dry fertilizer blends and deliver highly-available nutrition through better distribution in the field than traditional granular micronutrients. This is achieved with patented EvenCoat® Technology.

With EvenCoat Technology, WOLF TRAX products thoroughly coat each and every granule. The result is an even distribution across the field and delivery of the right amount of micronutrients needed in close proximity to growing roots.

IMPORTANCE OF BORON

Critical to the growth and health of all crops, boron is one of the most important micronutrients for sugarbeet growth and development. Boron plays a vital role in sugar production and translocation, cell wall and membrane structure, and is key to the production of defense barriers. With the right amount of boron available for plant uptake, you can maximize your yield results.

BENEFITS

- Enhances plant structure.
- Transfers ions, hormones and metabolites throughout plant.
- Facilitates sugar translocation.
- Cofactors of enzyme systems aiding in disease resistance.

WHEN TO UTILIZE

- Sandy soils and soils with low organic matter.
- Soils with high pH (> 6.8).
- Cool, wet soil conditions during planting increases risk of mineralization reduction and leaching during heavy rainfalls.

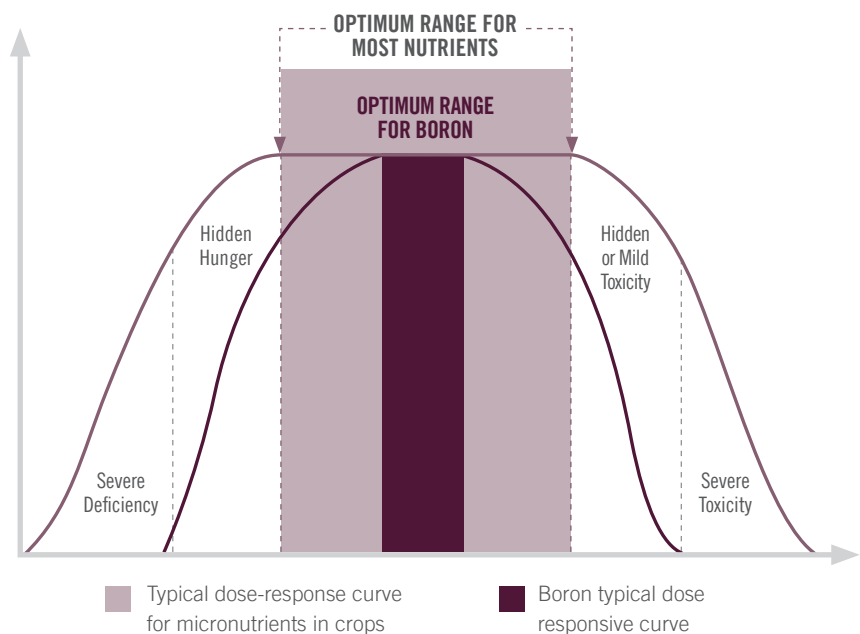

IDENTIFYING DEFICIENCY

- Wilting of tops.
- White, netted chapping of upper leaf blades.
- Cracking of petiole, or leafstalk.
- Death of growing point and development of 'heart' rot.

GET A BALANCED NUTRITION PLAN WITH WOLF TRAX

One of the main concerns with boron is the narrow line between deficiency and toxicity. With WOLF TRAX® DDP® micronutrients, you can have the confidence your sugarbeets are receiving the right amount of boron needed with a uniform distribution across your field. This provides your crops with a balanced nutrition plan to maximize your yield and decrease your risk of deficiency, hidden hunger and toxicity.

Application timing: Early-season application and in-season supplementation.

Set crops up for success with a balanced nutrition plan.
