

BENEFITS OF WOLF TRAX[®] IRON DDP[®] ON TURF GRASS

WOLF TRAX[®] Iron DDP[®] provides an excellent method of applying iron where turf grass roots can access it in the right amount for improved growth and color. Derived from two forms, iron oxide and amino acid complexed iron, WOLF TRAX Iron DDP is specifically designed to simplify nutrient management and boost turf performance.

SIMPLIFY NUTRIENT MANAGEMENT WITH WOLF TRAX

WOLF TRAX DDP micronutrients are uniquely designed to coat dry fertilizer blends and deliver highly-available nutrition through better distribution than traditional granular micronutrients. This is achieved with patented EvenCoat[®] Technology.

With EvenCoat Technology, WOLF TRAX products thoroughly coat each and every granule. The result is an even distribution across the field and delivery of the right amount of micronutrients needed in close proximity to growing roots.

IMPORTANCE OF IRON

Iron is an essential nutrient as it plays a vital role in plant growth, enzyme function, nitrogen metabolism and oxygen transport. Without sufficient iron, oxygen levels are reduced resulting in decreased chlorophyll production. Chlorophyll is responsible for the absorption of light to provide energy for photosynthesis. Reduced chlorophyll production can be detrimental to turf growth and quality.

BENEFITS

- Improves oxygen transport and chlorophyll synthesis.
- Increases visual greenup without additional biomass.
- Aids in plant defense against disease.

WHEN TO UTILIZE

- Coarse-textured soils with low organic matter.
- High pH soils (> 6.8).
- Cool and wet conditions.
- High soil phosphorus, salinity and calcium carbonate levels.

IDENTIFYING DEFICIENCY

- Stunted plant growth.
- Interveinal chlorosis or yellowing of young leaves. In severe cases, death of leaf tissue may occur.
- Can be challenging to identify deficiency without testing.

GET A BALANCED NUTRITION PLAN WITH WOLF TRAX

With WOLF TRAX® Iron DDP® you can have the confidence your turf grass is receiving the right amount of iron needed with a uniform distribution. This provides your turf grass with a balanced nutrition plan to maximize your yield and color while decreasing your risk of deficiency and hidden hunger.

Application timing: Can be applied in conjunction with all dry fertilizer applications.

Set crops up for success with a balanced nutrition plan.
