

BENEFITS OF WOLF TRAX® BORON DDP® ON ALFALFA

WOLF TRAX® Boron DDP® provides an excellent method of applying boron where alfalfa roots can access it in the right amount for required yields. Derived from three forms, boric acid, sodium tetraborate and potassium tetraborate, WOLF TRAX Boron DDP is specifically designed to simplify nutrient management and boost crop performance.

SIMPLIFY NUTRIENT MANAGEMENT WITH WOLF TRAX

WOLF TRAX DDP micronutrients are uniquely designed to coat dry fertilizer blends and deliver highly-available nutrition through better distribution in the field than traditional granular micronutrients. This is achieved with patented EvenCoat® Technology.

With EvenCoat Technology, WOLF TRAX products thoroughly coat each and every granule. The result is an even distribution across the field and delivery of the right amount of micronutrients needed in close proximity to growing roots.

IMPORTANCE OF BORON

Critical to the growth and health of all crops, boron is one of the most important micronutrients for alfalfa production. Boron plays a key role in carbohydrate metabolism and the cell wall structure of the plant, maximizing quality. By ensuring adequate boron supply throughout the growing season, alfalfa growers can benefit from an increase in regrowth, flower development, drought tolerance and winter hardiness— overall maximizing yield potential.

BENEFITS

- Improves nodule development.
- Enhances cell development and integrity of the plant.
- Improves root growth and development allowing greater access to nutrients and water.
- Increases nitrogen fixation and ammonification.

WHEN TO UTILIZE

- Sandy soils and soils with a low CEC.
- Soils with high pH (> 6.8).
- High moisture conditions. Boron is mobile in soils and can leach out of the rooting zone with excessive rainfall.
- Low moisture conditions can create a lack of plant available nutrients and movement.

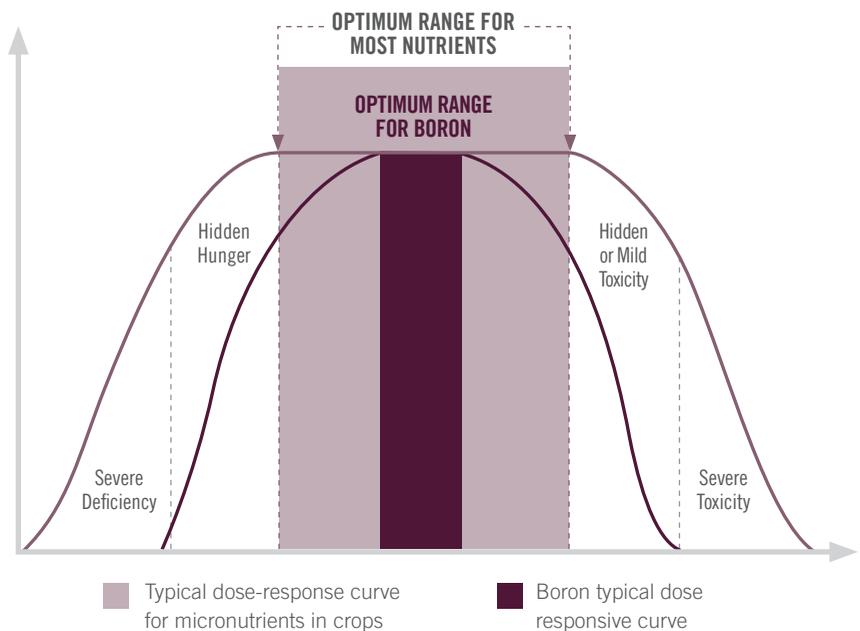

IDENTIFYING DEFICIENCY

- Yellow discoloration in upper leaves, similar to leafhopper damage.
- Shortened internodes and flower reduction.
- Death of growing tips, followed by regrowth at the lower axis.

GET A BALANCED NUTRITION PLAN WITH WOLF TRAX

One of the main concerns with boron is the narrow line between deficiency and toxicity. With WOLF TRAX® DDP® micronutrients, you can have the confidence your alfalfa is receiving the right amount of boron needed with a uniform distribution across your field. This provides your crops with a balanced nutrition plan to maximize your yield and decrease your risk of deficiency, hidden hunger and toxicity.

Application timing: In-season supplementation with top-dress applications.

Set crops up for success with a balanced nutrition plan.
